MIST SHOWER

Effective Decontamination for Cleanroom Entry

Our Mist Shower systems are designed to remove surface contamination from personnel and materials before entering cleanroom environments. Using fine mist nozzles, the system effectively cleanses the body and garments, helping to maintain the required cleanliness and hygiene standards in pharmaceutical, biotech and other critical facilities.

KEY FEATURES

Effective Contamination Removal
Fine mist nozzles remove dust and surface contaminants from body and garments.

Interlock Safety System
Interlocked doors ensure safe operation and prevent cross-contamination.

Emergency Stop
Quick stop feature for enhanced safety and control.

Stainless Steel Construction
SS 304/316 for durability, corrosion resistance and easy maintenance.

Customizable Design
Available in various sizes and configurations to suit your facility requirements.

TECHNICAL SPECIFICATIONS

Internal opening area (per door)	:	800 x 1100 x 1900 mm (standard size – can be customized)
Material	:	SS 304 / 316
Mist nozzles	:	High-pressure fine mist nozzles (SS 316)
Interlock system	:	Between 2 doors
Emergency stop	:	Provided
Power supply	:	220–240 V, 50 Hz (or as per requirement)
Control panel	:	PLC / Microprocessor based with timer & indicators
Floor	:	SS grating / anti-slip flooring
Option	:	HEPA filtration, Auto cleaning cycle, Custom dimensions

Ideal for Pharma, Biotech, Chemical, Food & Beverage and other contamination sensitive industries.
