

PASS BOX SOLUTIONS

Safe, Controlled & Contamination-Free Material Transfer

Our Static and Dynamic Pass Boxes are designed to ensure safe and efficient transfer of materials between cleanroom areas with different cleanliness classifications, minimizing the risk of cross-contamination.

STATIC PASS BOX

Simple & Effective Material Transfer

Static Pass Box is used for manual transfer of materials between two areas of different cleanliness levels. It helps maintain the integrity of the cleanroom by reducing personnel traffic.

KEY FEATURES

- Robust stainless steel construction
- UV light (optional) for surface decontamination
- Interlocking doors (optional)
- Smooth, easy-to-clean interior
- Available in standard and custom sizes

DYNAMIC PASS BOX

Advanced Protection with Active Purification

Dynamic Pass Box is equipped with HEPA filtered laminar airflow to continuously purge the chamber with clean air, ensuring higher levels of contamination control during material transfer.

KEY FEATURES

- HEPA filtered unidirectional airflow
- UV light for continuous decontamination
- Interlocking doors with safety control
- Differential pressure gauge for filter monitoring
- Stainless steel 304/316 construction
- Available in standard and custom sizes

APPLICATIONS

Pharmaceutical Industries

Biotechnology Labs

Cleanroom Facilities

Research & Chemical Industries

OPTIONAL FEATURES

- Digital interlock system
- HEPA filter with indicator
- Differential pressure gauge (for dynamic)
- Pass-through type (for material)
- Custom size & design
- Powder coated finish (optional)
